

ABSTRACT

5 Signalling between transmitting means and receiving means wherein
signals from the transmitting means are subjected by the receiving means to
deliberate reflections and resulting signals are transmitted back as
meaningful at the transmitting means, different deliberate reflections
having effects on said resulting signals that have different meanings at
said transmitting means. Two-way signalling involves first signalling in
10 one direction by sending signals with certainty of deliberate reflection
thus resulting signals for return related to the signals sent according to
the nature of the deliberate reflection and second signalling in the other
direction by varying the nature of the deliberate reflection.
